

ADVANTAGES OF EASYACC'AIR

PRATICITY

- Optimal opening making it easier to load and unload parcels, rolls, pallets...
- Compatible with rear optional equipment usually fitted in bodies with rear doors : air curtain, rear evaporator, transverse or longitudinal partition...
- Invisible closing kinematics with a reduced impact on the overall height
- Optimisation of deliveries and cold chain management, physically effortless opening and closing in less than 10 seconds
- Multiple controls accessible even at the dock thanks to their ergonomic and customisable fitment

DURABILITY

- Reduced maintenance for the motor, located outside of the body to keep it safe from cold, moisture and shocks
- Targeted maintenance through its intelligent motor : maintenance monitoring and alarm
- Fast and efficient reparability thanks to its integrated self-diagnosis tool
- Strongly built system, exempt from vibration, that does not require any adjustment
- Panel section designed to ensure optimised maintenance

PERFORMANCE

- Insulation and absolute watertightness reduce the stress on the refrigeration unit and lower fuel consumption and CO₂ emissions
- "Class C"- certified sectional door
- Guaranteed opening, even when frozen
- Silent motor and engineering complying with **Plek** certification

SAFETY

- Safety detector to avoid pinching (goods and operator)
- Automatic retaining of sectional door in closed position
- In case of emergency, it can be opened manually from the inside and outside
- Anti-theft system (as an option)

HYGIENE

- Entirely smooth interior surface for optimal hygiene
- External kinematic system designed to prevent pollution from entering

EasyAcc'Air

- PRATICITY
- PERFORMANCE
- DURABILITY
- SAFETY
- HYGIENE

The new sectional door **EasyAcc'Air** specifically shaped for heavy goods vehicles will make all urban deliveries easier. Using the latest innovations and technologies, this new LECAPITAINE patented rear opening system has been designed to meet your requirements in terms of temperature-controlled goods distribution.

The clever way it is placed above the bodywork creates the largest possible opening. **EasyAcc'Air** makes itself invisible like rear doors. Its functional design makes it compatible with all internal equipments.

EasyAcc'Air has a new, absolutely watertight system that optimizes the cold chain to secure transport of frozen products.

Secures transport of chilled and frozen products

Optimal opening

A doubly-patented Lecapitaine product

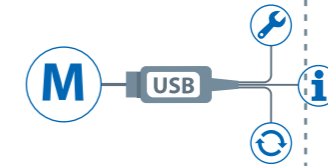

KINEMATICS

The **patented** and invisible opening kinematics does not affect the body internal volume. In the closed position, **EasyAcc'Air** only adds 80 mm to the overall height.

MOTORISATION

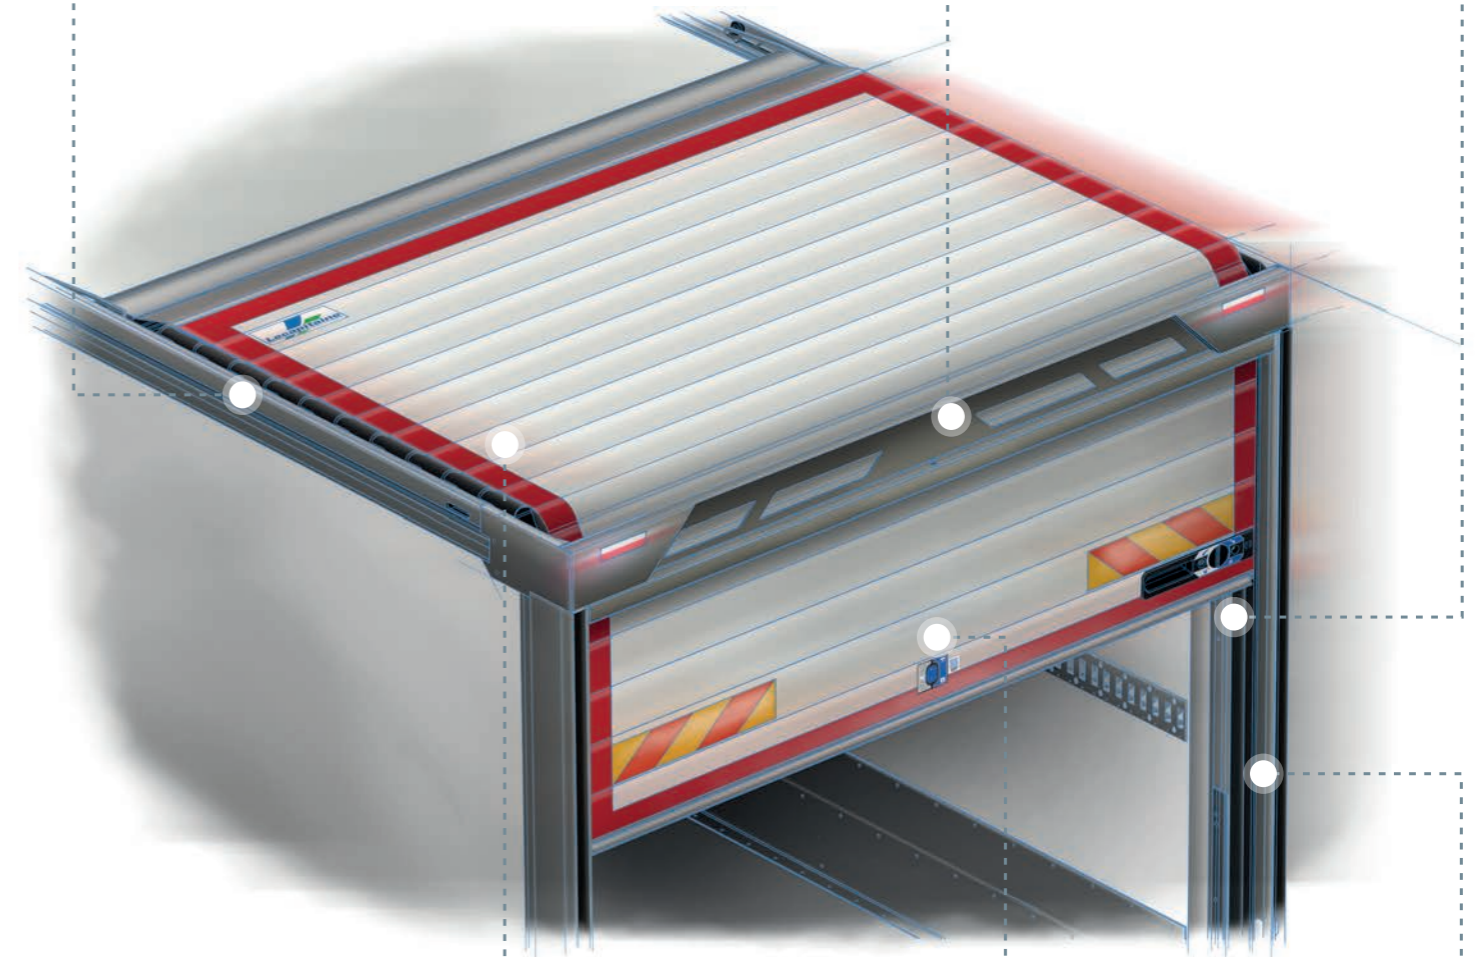

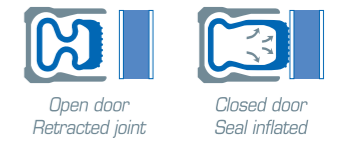

Intelligent motor that provides an integrated monitoring and self-diagnosis tool for reduced maintenance.

WATERPROOFNESS

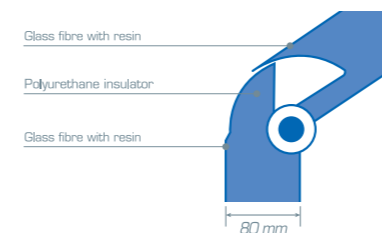

Automatic rubber seal inflation **patented** system to ensure watertightness and holding of **EasyAcc'Air**.

Inflatable seal :

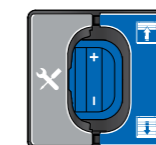

INSULATION

EasyAcc'Air is designed to resist shocks and UV light thanks to its composite panel (glass fibre + polyurethane resin). All the panel sections are made of polyurethane insulating foam providing reinforced insulation properties.

CONTROL

EasyAcc'Air ergonomic opening and closing controls are entirely waterproof and autonomous (wireless, no battery).

PILLARS

Robust profile integrated into the thickness of the panel.
